RESIDENT TABLET PLATFORM · OPEN SOURCE · PRIVATE

Handi Homepage

A resident tablet that runs itself - built for your catalogue.

Nursing homes want to keep residents **safe online**, **entertained**, and **connected with family**. Most senior tablets need constant setup, support, and updates — and they quietly collect resident data. **Handi Homepage** is different: managed remotely through an API, so there is almost nothing for your team - or the care home - to do.

WHY CARE HOMES ASK FOR IT

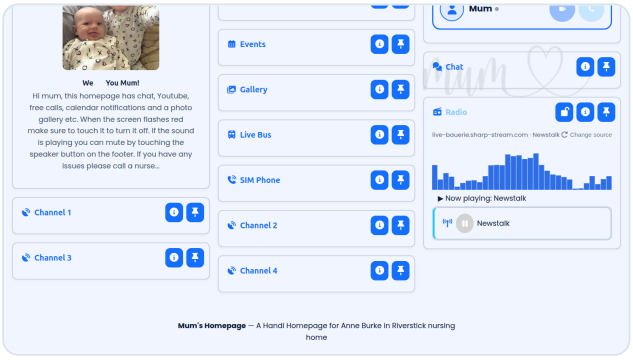

- **Safe by default.** A locked-down, senior-friendly interface - no scams, no confusing menus, no accidental purchases.
- **Connection.** One-tap voice and video calls to family, even for residents who struggle with technology.
- **Entertainment.** Simple on-screen radio, photos, and familiar content to fill the day.
- **Zero upkeep.** Updates, configuration, and security are handled remotely and centrally.

WHY IT WORKS FOR YOU

- **You already sell to this market.** It slots into the same homes and hospitals you supply today.
- **No support calls.** Remotely managed - no IT burden on your team or the home.
- **Recurring revenue.** A per-screen licence you can mark up alongside your hardware.
- **No lock-in.** Open source and auditable, private by design.

Non-exclusive · **Free trial** · **Flexible terms** - place it with a customer first and see the response. Flat monthly licence or per-active-screen fee, structured so it is easy for you to sell.

See it live. A working Handi Homepage configured for a resident in a nursing home - safe mode, chat, calls, radio, and family photos.
